

Power Curves by Inflation Level

Gate 1: $P(\text{Beta}_{\text{target}} > \text{Beta}_{\text{baseline}} + \Delta_{\text{min}} \mid \text{data}) > 0.95$. Vertical dotted = first N reaching 80% power.

N_seeds=200 per cell. $\Delta_{\text{min}}=0.05$, baseline=0.7. Log x-axis. Dashed gray = 80% target; orange dotted = 5% FP ceiling.
