

Bridge B Phase B: Centroid Convergence by Graph Maturity Level

Single-cell simulation (each (c,a) centroid independent). Mean over 1200 cells (50 seeds $\times$ 6 categories $\times$ 4 actions).

soc_product_v50 (C=6, A=4, d=6). $\eta=0.05$, $\epsilon=0.05$, $e_o_{base}=0.15$, $\rho=0.8$. Factor variances from P1 (FX-1-PROXY-REAL: 3 measured + 3 extrapolated).
