

Bridge B Phase B: Convergence Acceleration by Graph Enrichment Level

% reduction in mean N_converge vs G₁ baseline. Green bars ≥ 30% success gate.

Baseline G₁ mean N_converge = 61 decisions. G₂ uses $\rho=0.8$ correlated sources. G₃ adds entity resolution ($e_0 \times 0.85$). G₄ adds ThreatIndicator accumulation ($threat_intel$ variance $\times 0.70$).
