

Bridge B Phase C v2: Endogenous Enrichment — Error and Noise Co-Evolution

Full scoring (C=6, A=4). Graph state G(t) grows with each decision, reducing factor noise endogenously.

soc_product_v50 (C=6, A=4, d=6). 50 seeds, $\eta=0.05$, $e_0=0.2$. $P(\text{entity})=0.3$, $P(\text{IOC})=0.05$. Enrichment rates are environment-specific estimates.
