

Bridge B Phase C v2: Graph State Accumulation Over 5000 Decisions
Endogenous flywheel effect: each decision adds to G(t), reducing factor noise. N=50 seed indicators shown.
TravelRecord + Asset + Device nodes
IOC accumulation → threat_intel noise ↓

P(new entity)=0.3/decision, P(new IOC)=0.05/decision, P(cross-link)=0.1/decision [after 100 total]. These rates are environment-specific estimates.
