

Bridge B Phase C v3: Graph Enrichment and Factor Noise Co-Evolution

Entity and IOC accumulation reduce factor noise endogenously. N=50 seeds mean. Shift points marked.

$P(\text{entity})=0.3/\text{decision}$, $P(\text{IOC})=0.05/\text{decision}$ (environment-specific estimates). entity_denom=1500, ioc_denom=500, no cap → progressive noise reduction across all three phases.
