

# V3A: Data Efficiency — ProfileScorer vs ML Baselines

## Compiled ontology (warm-start) achieves high accuracy with zero labeled data

10 seeds,  $C=5$ ,  $A=4$ ,  $d=6$ ,  $\tau=0.1$ ,  $\eta=\eta_{\text{neg}}=0.05$ , ProfileScorer warmed on 200 unlabeled decisions. Shaded bands =  $\pm 1$  std across seeds.
